-!- FUNCTION: Binds copper, nickel, and fatty acids as well as, and bilirubin less well than, serum albumin. Only a small percentage (less than 2.8) of the human APP shows estrogen-binding properties.
-!- SUBUNIT: Dimeric and trimeric forms have been found in addition to the monomeric form.
-!- SUBCILIULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Plasma. Synthesized by the fetal liver and

Molecular characterization of dog albumin as a cross-reactive

a lalergen...

J Allergy Clin. Immunol. 93:614-627(1994).

C -: FUNCTION: Serum albumin, the main protein of plasma, has a good

binding capacity for water, Ca(2+), Na(+), fatty acids,

hormones, bilitubin and drugs. Its main function is the regulation

of the colloidal osmotic pressure of blood.

C -: SUBCELIULAR IOCATION: Secreted.

-: SIMILARITY: Belongs to the ALB/AFF/VDB family.

-: SIMILARITY: Contains 3 albumin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-EROT entry is copyright. Natl. Acad. Sci. U.S.A. 90:2409-2413(193).
-!- FUNCTION: Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                 DIPSLAADFVESKDVCKNYAEAKDVFLGMFLYEYARRHPDYSVVLLLRLAKTYETTLEKC

A.Groment: Serum albumin is synthesized in the liver as preproalbumin. It binds copper,
C.Comment: Serum albumin; serum albumin repeat homology promote their transfer across the memb:
C.Superfamily: serum albumin; serum albumin repeat homology
C.Keywords: carrier protein; duplication; metal binding; plasma
C.F.19.70main: signal sequence #status predicted < RGO.
F.19-24/Domain: serum albumin repeat homology < SA3.>
F.20-201/Domain: serum albumin repeat homology < SA3.>
F.20-333/Domain: serum albumin repeat homology < SA3.>
F.412-591/Domain: serum albumin repeat homology < SA3.>
F.412-591/Domain: serum albumin repeat homology < SA3.>
F.77/Binding site: copper (His) #status predicted
F.77/Binding site: bilirubin (Lys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PTLVEVSRNLGKVGSKCCKHPEAKRMPCAEDYLSVVLNQLCVLHEKTPVSDRVTKCCTES 480

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
